

## 2020 NEW ITEMS NOVEMBER

### RELEASING:

4 HEATER CORES COVERING OVER 2.1M LATE MODEL VIO AND  
2 ALUMINUM REPLACEMENT HEATER CORES FOR COPPER CORES

The heater core is responsible for warming the air used to operate your vehicle's heating and defrosting functions. It circulates hot coolant from the engine to the cabin in order to warm the air inside the vehicle.

When a repair is needed, choose a quality aftermarket heater core. Pro Source Heater Cores™ are designed to match O.E. fit, form and function.

Our products are engineered and tested to provide years of trouble-free operation. Backed by over 50 years of mobile HVAC experience, fix it once and fix it right with Pro Source.
